

## **Statement**

Alexander Valchev is an artist who accepts sculpture as his creed. For him it is the most complex, comprehensive and hard about making art. It can be seen in all his activities, through its principles he perceives the world regardless of what he does and with what kind of medium he expresses himself as an artist. Sometimes his sculptures are abstract and the main things that interest him are the search itself, empathy the process of establishing and research of shapes and spatial relationships. Other times his works are socially responsible and with them he makes metaphorical commentary on what is happening around us. But in each case Alexander believes that sculpture, is always here, all around us in the three-dimensional world, to provide a new meaning and new life of the reality.
